Altro Transflor stars in Disney themed trains

Altro Transflor is starring in Disney character themed trains running on Hong Kong's new Disneyland Resort Line (DRL). Designed in conjunction with Disney's Imagineers and manufactured by United Goninans under contract from MTR Corporation, the three DRL trains have been specially created to transport passengers to the magical realm of Disneyland.

Each compartment has been decorated in Mickey Mouse's trademark colours of white, red, yellow and dark blue. The Disney theme has been incorporated into every aspect of the design including the side windows and handles for standing passengers, which are shaped like Mickey Mouse's head.

Altro Transflor MET20LTX was specially created in a bespoke shade of midnight blue with bright red and yellow chips, to complement the bright, fun interior. In addition to matching the train design perfectly, Altro Transflor was also chosen for its durability and continuous slip resistance – attributes which were highly important for such busy environments that would receive heavy volumes of on-foot traffic.

“We are delighted with the Altro flooring used on the new DRL trains,” said Joseph Au, design engineer for MTR Corporation. “Altro’s flooring has a great appearance combined with other key properties such as durability, fire performance and ease of maintenance.”
