

**New Speed Welding Nozzles**

Altro have introduced a new welding nozzle to complement the 5mm standard nozzle that is normally used for welding Altro Safety Flooring.

The new nozzle will be known as "Cove" nozzle. The 4mm nozzle will no longer be available from Altro, as it is possible to weld 4mm welding rod using the standard 5mm welding nozzle.

For many years experienced fitters have been altering the angle of the welding gun tip to help them approach the cove joints from a lower level. In addition to this, some of them would file off the heel of the speed weld nozzle and turn up the toe, thus allowing them to weld around the curve of the cove. This method also avoids the heel scraping the bottom of the cove where it levels out onto the floor. The new "Cove" nozzle is shaped to the curve of the cove, thus making it easy to use and to produce a neat weld on the cove.

In the past, the standard 5mm nozzle has been used to weld joints on the coving as well as the straight floor joints.

**Logo customisation – Pre-cut shapes and designs**

For an easier and more practical way to achieve beautiful flooring designs – this design and cutting service from Altro floors offers you a choice of standard designs of varying complexity from simple easy to install patterns, to more intricate inter cutting demanding greater skill.

Alternatively you may provide your own designs or brief us so that our team of designers can produce them for you. We can also incorporate lettering logos or simple illustrations into the flooring all cut precisely to shape using the latest technology and delivered to site ready for assembly.
